PHC 6326: Environmental and One Health

Worldwide, many public health challenges result from complex and inextricable interactions between humans, animals, and the environment, necessitating a systems approach, One Health, to addressing the challenges. This intermediate level course introduces concepts, theories, and applications of environmental health sciences in the context of One Health. With an emphasis on environmentally-mediated and zoonotic diseases, the course will cover how key biological and chemical agents affect human health in both developed and developing nations, and how One Health approach is utilized to address these health issues. The course combines lectures, discussions, and a class project.
